## ASRS DSM-5

**The Adult ADHD Self-Report Screener, symptoms checklist, and proprietary scoring rules (ASRS DSM-5) is a self-report questionnaire designed to assess Attention Deficit Hyperactivity Disorder (ADHD) symptoms in adults (18+).**

The Adult ADHD Self-Report Scale is an instrument updated to DSM-5 criteria; the screener is contains six questions that were found to be the most predictive of symptoms consistent with ADHD. These six questions are also Part A of the ASRS-5 Symptom Checklist. Part B of the Symptom Checklist contains the remaining twelve questions.

**\*\*Please Note: For Research and Academic Use agreements, an institutional signatory is required to complete the process. An Institutional Signatory has the ability to sign on behalf of an institution for legal and financial matters (often a member of your legal, technology transfer, or leadership staff). Before you begin the process, we advise knowing who the appropriate signatory is for your institution (including their name and email).**
