

NYU Locus

NYU Locus Attendance Tracking and Seating Chart Software

NYU Locus™ is a seating chart and attendance tracker that is specifically designed to organize and assign student seating within a classroom environment. It helps faculty members and school administrators to track attendance, manage classroom dynamics, enhance student engagement, learn student names and gender pronouns, and create more effective and supportive learning environments. The core features of the system include:

1. Interactive layout design for different types of classroom environments
2. Drag-and-drop seating assignments
3. Printable seating charts, flashcards, and name tents
4. Integration with different learning management systems and student information systems
5. Available Application Programming Interfaces to integrate with other applications, such as name pronunciation software
6. Integration with RFID card readers to make it easier for students to check-in (Coming Soon)
